EXTERNAL:

As a School Counselor for children in the Salinas Valley, I'm writing you to insist that all residents of California be kept from breathing more than 0.04 parts per billion of 1,3-D, including farmworker communities!

DPR states: "Treating people fairly guides how DPR conducts its activities. Fair treatment means that no one group of people, including racial, ethnic, or socioeconomic groups, should be disproportionately impacted by pesticides." Yet DPR proposes that our farmworker communities, which are overwhelmingly Latino, should get 14 times a higher risk of cancer from 1.3-D than other Californians. This is unjust, racist and immoral. Farm workers are NOT 14 times less valuable than other Californians!
