EXTERNAL:

We live next to field and during fumigation , I struggled with asthma the whole fumigation time , a week later it was better . We called Age department because of how close they were to our house and basically they said you're lucky it's not worse, its all within legal limit . It's completely not fair we have to suffer health issues so farmers can make money and yet we have all these clean air acts but farmers can poison our air that we breathe. There's got to be a better way to contain this poison . We even have a pond right by where they were fumigating and we even told Ag Dept about that . They seemed to not care , there is a lot of money being made on luxury crops on the backs of the health of the people living near the fields .It used to be cattle in that field not Strawberries and our property has been in our family for 7 generations . Now we're being subjected to pesticides and fumigates because of money to be made. In fact all of Aromas is , it's a bowl here . So sad in this day and age we can't do better for our future generations health.

Kind Regards , Kathleen
