EXTERNAL:

The DPR is planning to regulate 1.3-D at 0.56 parts per billion as urged by Dow Chemicals who makes the pesticide. The California Office of Environmental Health Hazard Assessment (OEHHA) has stated that this is not a safe level and recommends 0.04 parts per billion as the best regulation of 1.3-D

The DPR has chosen Dow's numbers. Why? Because DPR's funding depends on fees from pesticide sales. There can be no more a dystopian, heartless arrangement than this.

You are going to poison large swaths of California and cause an untold number of deaths by cancer, birth defects, asthma, lung damage, and impairments of every kind, some slow and malingering, especially for farmworkers, their children, and the nearby communities and their children where 1.3-D is sprayed.

DPR states: " Treating people fairly guides how DPR conducts its activities. Fair treatment means that no group of people, including racial, ethnic, or socioeconomic group should be disproportionately impacted by pesticides."

Really? You know that is a lie. When you go to work do you hang your morals, and your hearts on the coatrack at you office door?

I demand that 1.3-D be regulated at 0.04 and NOT 0.56. Its not too late to lay claim to your humanity. You can do it.
