---

EXTERNAL:

I strongly urge you to lower the limit of 1.2-D in the air to below 0.04ppb in the vicinity of people, especially children, keeping in mind the ability of poisons to travel in the air. This is required by the OEHHA.

I do so as a grandparent, as a teacher - as a human being!

I know that you, whoever reads this, is a human, has children in your life, somewhere, cares about life and our environment. Have the guts to do what may be the unpopular, the seemingly unprofitable, the difficult. Humanity and the planet will thank you.

Respectfully, Roland Saher
