EXTERNAL:

Dear commissioners,  
Please revise your draft on the regulation of 1,3-D pesticide. It should have stayed banned in California. Short of that, please follow the safer level of 0.04 stated by the state scientists in OEHHA (Office of health hazard assessment.) Even though it is liquid and injected under the tarp, the tarp can break, the liquid over time becomes gas and it travels far and beyond the field. Farm workers lives, nearby school children, residents are harmed. Even people away from the field are harmed. Please do your duty in regulating pesticide. Do not follow the level suggested by the maker of the pesticide. We shall all learn from the lesson tobacco executives lied to the US Congress on how safe the tobacco was.
