Date Sent: 4/30/18
Assigned By: C. BURSON

History

S: 70 yo M had sprayed Spectracide Accu Shot crabgrass killer on his grass yesterday. Later in the day, pulled some weeds with his bare hands and then went inside the house to eat a hot dog. Didn't remember to wash his hands first and after he ate the hot dog, he felt some burning sensation around his lips and later on in the day felt some lower abdominal discomfort. Did not bring in bottle to ED. No other sx, no n/v/d and no acute changes or complaints per MD.

O: VSS per MD

Chem, CBC are completely normal per MD

A: Since did not bring in actual product, MSDS for this product matches most closely to the description though some Spectracide products contain low concentration of diquat. If hx correct, residual/unintentional ingestion of diquat therefore not expecting more than minor effects - mouth burning/irritation, can see abd pain, n/v/d. Intentional/lg ingestions of diquat can cause renal failure.

<http://www.spectracide.com/products/weed-and-grass-killers/lawn-weed-killers/spectracide-weed-stop-for-lawns-plus-crabgrass-killer-accushot-sprayer.aspx>

P: Care is supportive, discuss above. Rec antiemetics prn, po challenge. Return to ED if profuse vomiting/diarrhea occur.
