

The top five pesticides used in each county in 2018 and the top five sites upon which these pesticides were used. The ranking of sites and pesticides is determined by total pounds of active ingredient used. The acres treated are mostly agricultural. Cumulative acres treated is calculated by summing the acres treated in each application even when the same field is treated more than once in a year. (For example, if one acre is treated three times in a year with an individual active ingredient, it is counted as three acres treated.) Chemical names that end with an “ \* ” are adjuvants. Application counts (Num. Apps) include only production agricultural pesticide uses. Acres treated totals (Acres) applies to production agricultural pesticide uses and those non-production-agricultural uses legally required to report acreage. A zero value in acres or applications indicates all applications were non-production-agricultural uses. Text files of data are available at <ftp://transfer.cdpr.ca.gov/pub/outgoing/pur/data/>.
